

Detachol removes the risks, pain, and discomfort of adhesive removal.

Here is a sampling of what nurses and clinical educators say about Detachol...

"We have implemented Detachol throughout the hospital which has decreased skin tears and increased patient satisfaction. Patients are not as anxious having dressings or electrodes removed since it doesn't hurt."
- Lori B., Pediatric CNS, Madison, WI

"We use Detachol all the time in Pediatrics and PICU. It is great for dressings and IV tape removal because it does not burn and the tape slides right off. Our fearful patients love it because it doesn't hurt."
- Alix D., CNS, Pasadena, CA

"Detachol has made the removal of dressings very simple and much less painful. The way it is supplied allows for minimal waste and for ease of application."
- Deb H., RN, Portland, OR

"Detachol works very well at releasing tapes and Tegaderm[™]. It is fast and effective."
- Rachel, K., RN, Madison, WI

"We have used Detachol in our clinic in the past. I always liked using it and the kids seemed to like it because the smell was tolerable. Also, you could manage the liquid coming out of the applicator to make the dressing come off easily."
- Melissa P., RN, CPON, Green Bay, WI

"Detachol is perfect for removing days worth of sticky tape residue from IV sites and bandages. When you need those Steri-Strips[™] off? Apply Detachol right onto the strips and the adhesive just melts away."
- Teri H., RN, Ogden, UT

"We use Detachol daily in our oncology and blood and marrow transplant populations. Our inpatient and outpatient nurses appreciate Detachol's effectiveness in safely removing Central Venous Line (CVL) dressings. Our nurses believe Detachol helps to remove the dressing while causing as little discomfort as possible for the patient."
- Kitty M., MS, RN, PCNS-BS, CPHON, Milwaukee, WI

"Detachol does not have a strong odor and easily removes central line dressings without irritating the skin or leaving a residue. Great product!"
- Kari S., CNS, Madison, WI

"We had previously used AllKare[®] Adhesive Remover Wipes for removal of tape or adhesive dressings in a trauma II acute care hospital. Compared to this product, Detachol provided sufficient quantity to remove a large hip dressing, left no residue on the skin, and allowed for much more time efficient care and higher patient satisfaction."
- Diane P., RN, WOCN, Aurora, CO

"Epidurals require a lot of tape to keep the catheter in place on a child's back, and Detachol has made removal of this tape pain-free for our kids."
- Kimberly E., MS, APRN, PCNS-BC, Tinley Park, IL

"An ostomy patient with a revision and very tender abdomen and skin was concerned about their first appliance change. With Detachol, the patient was not even aware that I was removing the wafer as it came off so easily."
- Sylene J., BS, BSN, RN, WOCN, Lone Tree, CO

"Detachol is one of the best adhesive removers out there."
- Mary Lynn R., RN, MSN, CPON, Chicago, IL
